

Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF)®, Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

Monthly Commentary

For the month ending May 31, 2019, the Key Trends UCITS (A-EUR Shares) posted a net return of -5.31%, bringing the net YTD return to +2.14%.

During the month of May, stocks fell around 6% in both the U.S. and Europe. Markets were (yet again) rattled by the U.S./China trade war: The U.S. government increased tariffs from 10% to 25% on \$200B of Chinese goods, the President Trump administration threatened to ban Huawei's products from the U.S., and China retaliated with new tariffs on a range of American goods, including Caterpillar and Boeing. China also threatened to cut exports of rare-earth minerals used in the defense and energy sectors. To keep things interesting, Trump caught markets by surprise by also threatening tariffs on Mexican goods, starting with a 5% tariff in June, and culminating to 25% until Mexico fixed the flow of illegal immigration across the U.S./Mexico. The Mexican Peso sank just after this announcement. European stocks were penalized by news on Brexit as U.K. Prime Minister Theresa May resigned after cross-party talks on Brexit deal collapsed, deepening fears about a chaotic divorce from the European Union – this pushed GBP lower against the USD. Reports showed that business activity in E.U. was weaker than expected in May and concerns over the fate of Britain's exit helped drive European bond yields lower. Late in May, a report from Markit showed U.S. factory growth slumping to its lowest rate in over nine years, suggesting that the U.S. economy is stumbling due to global weakness. The U.S. Treasury yield curve inverted in May 2019 with the 10-Yr U.S. Treasury yielding 19 basis points less than the 3-Month U.S. Treasury Bill, the biggest inversion since 2007.

The trade war was the underlying theme driving the program in May. Daily performance was quite choppy and the model was very active on increasing exposure across most of the long positions on short-term rates and bonds. The increased exposure on rates and bonds early in the month drove large gains towards month-end, offset by losses on equities and currencies. Long signals on equities started to weaken towards month-end, mostly on U.S. (vs. European). Since the beginning of the year, bonds and equities have become more negatively correlated: their correlation continued to drift lower into May, with the 180-day correlation between the S&P 500 and the 10-yr U.S. Treasury standing at -0.52 on May 31, 2019. The Global Economic Factor was at its maximum level of 1.50 for most of the month of May.
