

Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF) [®], Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

Monthly Commentary

For the month ending July 31, 2019, the Key Trends UCITS (A-EUR Shares) posted a net return of +2.96%, bringing the net YTD return to +9.15%.

The trade war yoyo continues. In July, U.S. President Trump offered concessions to Chinese leader Xi Jinping: No new tariffs and easing restrictions on Chinese tech company Huawei. China countered with making unspecified new purchases of U.S. farm products. U.S. Treasuries traded slightly lower, but the yield curve tightened further, the spread between the 2-Yr and 10-Yr U.S. Treasuries was merely +14 basis points at month-end. To some market pundits and economists, a yield curve inversion signals the possibility of economic pain in the near future. The S&P 500 reached an all-time high in mid-July and finished up 1.3%. In Europe, Christine Lagarde's nomination to replace Mario Draghi as president of the European Central Bank reinforced expectations of further easing. German bonds appreciated, but here too, spreads between the 2-Yr and 10-Yr tightened from 43 to 34 basis points. The Euro dropped 2.6% and the GBP lost more than 4% (vs. the USD), on Brexit uncertainty (Boris Johnson being the new PM) and contracting U.K. factory activity. The EuroStoxx 50 fell slightly (-0.20%). Oil prices slipped on concerns that the global economy could be slowing.

July was relatively calm: There were small or no changes in positions on bonds and equity indices. The more significant reductions were on the commodity-linked currencies (AUD and CAD vs. USD). The program saw gains on both "Bad-news Brexit" and "Euro-zone Growth Is Slowing" themes, mainly from short GBP and Euro positions, and on long ST rates (Euribor and Short Sterling) positions. The bigger losses were on the "Fed Is Not Cutting As Much As We Thought" theme: With losses on long U.S. ST rates (3M T-Bill) and U.S. medium and long-term bonds. The global exposure was systematically adjusted from 8.47% to 8.48%, with global exposure still remaining below average.

Clearly, the model is pausing. We will have to see if this is the calm before the storm, or the calm before the calm.
