

### Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF) <sup>®</sup>, Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

### Fund Characteristics

### Monthly Commentary

For the month ending November 29, 2019, the Key Trends UCITS (A-EUR Shares) posted a net return of +2.07%, bringing the net YTD return to +7.99%.

In November, investors' hopes were lifted for a resolution of the trade war between the U.S. and China. U.S. Federal Reserve chairman Powell said that the U.S. economy was well positioned to support the labour market with no immediate need to further reduce the federal funds rate. Positive investor sentiment drove U.S. equities higher, with the S&P 500, the Dow Jones Industrial Average and the Nasdaq Composite breaking all-time highs. In Europe, the Euro Stoxx 50 hit record highs and was up by +2.80%. Growth for the Eurozone remains moderate, and a recession was barely avoided in Germany for Q3 2019. The yield on the German Bund (10-Yr) was unchanged and remained negative, while the German Schatz (2-Yr) yielded 3 bps higher. The 2-Yr U.S. Treasury yielded 9 bps higher and the 10-Yr U.S. Treasury yield was up 8bps. In currencies, the ICE U.S. Dollar Index gained +0.95% against a basket of major currencies, as the USD moved higher against safe-haven currencies such as the JPY and the CHF.

The model raised its exposure to U.S. and Canadian equities, and increased exposure to a lesser extent to European equities, taking advantage of the up-trend on equities. The program reduced its exposure to U.S. long bonds and European short-term rates, flipping short-term rates and bond exposure from net long to net short. The program is expressing a yield curve "flattener", with net short positions on the short-to-mid section (3M to 5Yr) of the yield curve vs. a net long position on the long-end (10Yr+). The model earned returns on the long exposure of the USD against all major currencies, except on the long MXN position vs. USD.
