

Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF)®, Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

Monthly Commentary

For the month ending May 31, 2018, the Key Trends UCITS (I-EUR shares) posted a net return of +0.64%, bringing the net YTD return to +0.25%.

Political events were the primary driver of markets in May. WTI crude oil reached \$72 per barrel on President Trump's decision to pull out of the Iran deal, but fell back to \$68 after OPEC and Russia released their plan to roll back output curbs. President Trump backed out and went back in agreeing to a one-day summit with North Korea's Kim Jong Un. Investors grew concerned of the Eurosceptics involved in the negotiations between Italy's Five Star Movement and the League. This fear of a potential anti-Europe government drove yields higher on Italian bonds - to levels not seen since 2012. The flight to quality drove German yields lower (prices higher). The Euro fell against the USD, dropping from 1.208 to 1.169. The Eurostoxx 50 erased its monthly gains to end the month at -3.7%, while US equities were more resilient with the S&P 500 finishing at +2.2%.

The program's biggest gainers were long positions on the German Schatz, Bobl, and Bund. These positions, which were sizeable since early April, driven by the system's non-linear trend signals, were a clear positive attribute for the Key Trends UCITS (I-EUR shares) vs the SG Trend Index this month. The European and US bond exposure was trimmed, while equity indices were decreased. The neutral bias on the US Dollar switched to long on nearly all seven currency pairs traded. Coming into June, the model is targeting an elevated level of risk (Ex-ante vol. = 14.3%, G.E.F. = 1.50) with long positions on equities, European bonds and the US Dollar, and short positions on US/Canada bonds.

Raphaël Gelrubin was recently quoted in Risk Magazine's article concerning correlation: "Investment allocation strategies that rely too much on correlation may encounter fat tails in their return distribution. Diversification is like fugu fish, it may be great but must be prepared with great caution."
