

Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF)®, Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

Monthly Commentary

For the month ending June 29, 2018, the Key Trends UCITS (I-EUR shares) posted a net return of +0.65%, bringing the net YTD return to +0.89%.

In early June, European equities rallied as the Italian turmoil eased, the merger frenzy resumed, and the ECB announced the end of QE, halting the bond-buying program end-2018, and hiking rates by mid-2019. U.S. President Trump's trade tariff threats halted the Eurozone equity recovery and Euro area shares dropped for the remainder of June. US stocks rallied faster and proved more resilient to the tariff threats. The Euro Stoxx 50 ended the month down 0.32%, whereas the S&P 500 gained 0.48%. Driven by positive growth data and the ECB news, the USD managed to perform well in June: The Bloomberg Dollar Index was up 0.90% and the currency approached its YTD high of 1.1547 against the Euro. Gold was down 3.49%, while in energies, President Trump urged OPEC and its allies to increase their production targets. OPEC responded with a planned production increase, but WTI rallied in late June when market pundits concluded that there would be a lag in attaining the increased output. WTI ended the month up 10%.

Overall exposure in June remained stable and slightly elevated, with the ex-ante volatility ending the month at 12.8%, driven by a Global Economic Factor ("GEF") at 1.25. The system rebalanced on equities, bonds, and currencies: Decreasing long positions on European equities by 1/4, cutting the 10-Yr and 20-Yr US Treasury positions in half, while increasing the long USD exposure (vs. GDP and JPY). Going into July, the portfolio is net long equities, long Euro bonds, short US Treasuries, and long the US Dollar.

YTD 2018, the Key Trends UCITS (I-EUR shares) is at +0.89% vs. -4.66% for the SG Trend Index (rebased to 10% volatility), an outperformance of more than 5%.
