

Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF)®, Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

Monthly Commentary

For the month ending April 30, 2019, the Key Trends UCITS (I-EUR Shares) posted a net return of +5.13%, bringing the net YTD return to +7.85%.

Global stocks rose this month on better-than-expected results from earning season, good economic data and optimism over U.S.-China trade talks. Markets were also pushed by the U.S. Federal Reserve's new wait-and-see approach to rate hikes. In addition, signals of the Chinese economy's rebound contributed to drive riskier assets higher. In this context, risk appetite improved, driving bond yields higher in both the U.S. and Europe. The Brexit extension removed the threat of a no-deal exit, furthering optimism on the U.K. which saw a strong increase of its government bond rates. The USD was flat this month against major currencies and finished slightly higher, benefiting from strong domestic data. The Swiss Franc was down on talk of more negative rates. The Canadian Dollar fell after the Bank of Canada abandoned its bias toward raising rates. Oil prices rose this month on lower exports from Venezuela, Iran and Saudi Arabia, as well as lower U.S. stockpiles, raising expectations of tighter global supplies. The price of gold fell as investors returned to riskier assets.

The biggest winners this month were long equity positions. The strong start of the month on the equity side went along with a poor performance on bonds due to the regained risk appetite from investors. The long positioning on bonds and rates which enabled to deliver the strong gains in March was gradually cut by 35% (on average). Bonds prices rallied sharply on the 24th of April. On the currency side, the model was long the USD against all currencies traded by the program with the Mexican Peso being the lone exception. The Mexican Peso showed strong resiliency since the beginning of the year against the USD and is the second best positive contributor this month. The short Swiss Franc position was decreased and the sector added +1.86% overall.
