

Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF)®, Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

Monthly Commentary

For the month ending February 28, 2018, the Key Trends UCITS (A-USD shares) posted a net return of -4.87%, bringing the net YTD return to +0.44%.

Global equity markets fell during the first week of February. Driven by an upbeat Fed outlook on the economy, coupled with US tax cuts and overheated US equity markets, investors weighed in on a potentially more hawkish Fed. By February 8th, the S&P 500 had lost 8.6%, while the EuroStoxx 50 had shed 6.4%. These losses were pared in half by month-end. The dollar rallied, gaining 1.8% against the euro by month-end. Bonds rallied on the equity sell-off, but quickly reversed to finish the month lower, with the yield on the 2-Yr US Treasury rising 11 bps, and 10-Yr Treasury yield rising 16 bps to 2.86%.

The model came into February having already decreased 15% of the total exposure on the second last day of January (driving by the Global Economic Factor or GEF), reducing the ex-ante volatility from 14.4% to 12%. From February 1 thru the morning of February 5 (before the drop in the PM), the model made further reductions, decreasing the ex-ante volatility from 12% to 7.6%; this figure was at 6.1% by month-end. During February, the model reduced long exposure on equities by ¾, half of that reduction took place before the big sell-off in the afternoon (NY time) of February 5. The biggest reductions by sector took place on long equities and the short dollar position. At month-end, the Key Trends UCITS had outperformed the SG Trend Index (rebased to 10V) by nearly 300 basis points.
