

Strategy Description

Key Trends is a medium-to-long-term systematic trading system, investing in the most liquid futures markets. Based on its innovative probabilistic model, Key Trends is able to detect establishing trends quickly, to characterize high potential established trends, as well as detecting trend reversals sooner, thus elevating Key Trends' profit potential versus its peers. Moreover, thanks to a unique "Global Economic Factor" (GEF) [®], Key Trends is able to assess the strength of global economic trends in order to optimize its portfolio exposure.

Monthly Commentary

For the month ending October 31, 2018, the Key Trends UCITS (A-USD) posted a net return of -5.52%, bringing the net YTD return to -3.37%.

Global stocks fell in October. The S&P 500 dropped by -8.8% and the EuroStoxx 50 by -7.8%. The biggest drops occurred on October 10, 11, and 24. This decline was driven by concerns on the U.S. / China trade war and on rising bond yields. Third-quarter earnings announcements dampened investors enthusiasm as some companies (Amazon, AT&T, Caterpillar...) showed disappointing results. Amazon.com's decision to raise the minimum wage for all of its employees to \$15/hr drove inflation fears higher. Crude oil also traded lower on global trade concerns. The US Dollar gained vs. the EUR as data showed business growth in the euro zone decelerated faster than expected. The GBP slumped on news that Brexit negotiations with the EU remained in deadlock. Gold rose as sliding global stock markets prompted risk-wary investors to buy the metal. U.S. Treasury yields rose slightly after having dropped during the mid-month equities sell-off and then rising again late in the month following hawkish speeches by Fed officials. German yields decreased as investors sought a safe-haven from Italy's budget deficit issues.

October was a difficult month for the Key Trends Program. The program saw most of the losses from long equities. There were small gains on short bonds and long USD positions. Coming into the month, the global exposure was high, with the Global Economic Factor ("GEF") at 1.38 and the ex-ante volatility at 13.6%. By month-end, the GEF had fallen to 1.02, driving the ex-ante volatility to 6.9%. During the month, exposure on equities was reduced from an overall leverage of +132% to -7% (net short). All positions in equity indices at the start of the month were long; the system gradually went short on 7 out of 12 equity index markets traded. The first short positions on European equity indices were initiated on October 11, while on the US markets this started one week later on October 19. In bonds, the system stayed short the US yield curve, while going back to long on European bonds. The long position in short term rates (as measured in duration) was increased three-fold.
